StockPulse — Flow Diagram / Flowchart

Purpose: Core step-by-step picture of how the app is entered, authenticated, routed by role, used by owners, and connected to backend APIs and the data layer.
Shapes: Oval = Start / End · Rectangle = Process · Diamond = Yes / No decision · Rounded = API or data service

Chart A — Full architecture flowchart (nothing skipped)

This is the complete application flow: Entry → Auth → Roles → Owner app → Settings → Backend APIs → Data layer (SQLite / libSQL, Vercel Blob, Twilio).

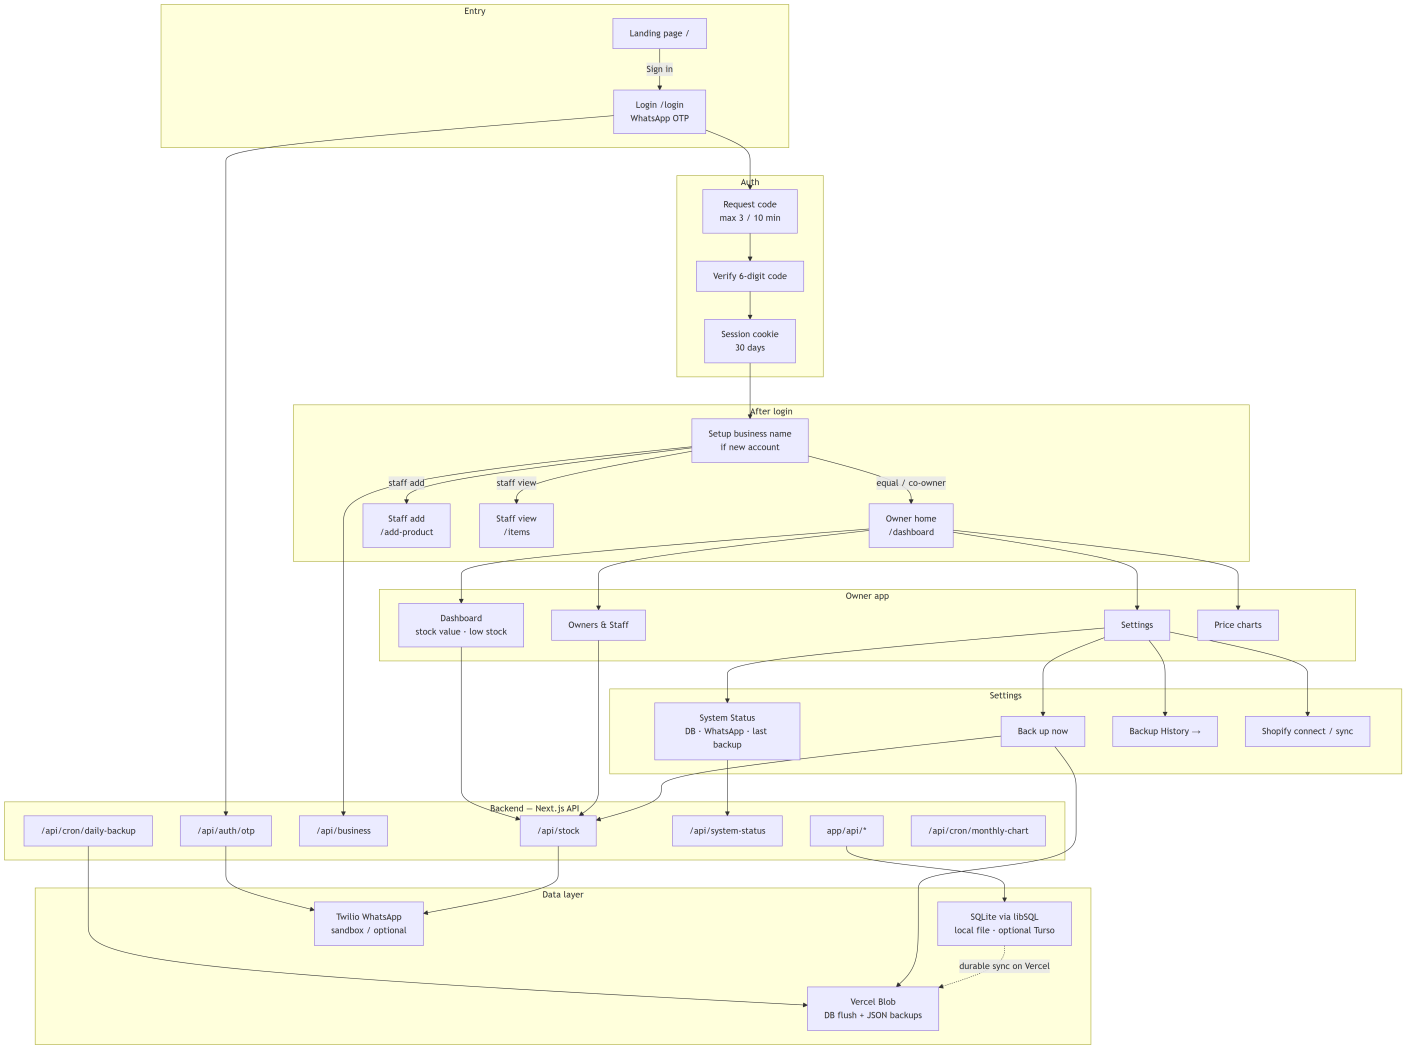

Chart B — Same flow as a traditional process chart

Start oval through login decisions, role routing, owner settings, and the backend / data layer.

Nodes included (checklist — do not skip)

Entry

- Landing page `/`
- Login `/login` — WhatsApp OTP (Sign in)

Auth

- Request code — max 3 / 10 min → `/api/auth/otp`
- Verify 6-digit code
- Session cookie — 30 days

After login

- Setup business name if new account → `/api/business`
- Owner home `/dashboard` (equal / co-owner)
- Staff add `/add-product`
- Staff view `/items`

Owner app

- Dashboard — stock value · low stock
- Owners & Staff
- Settings
- Price charts

Settings

- System Status — DB · WhatsApp · last backup → `/api/system-status`
- Back up now
- Backup History →
- Shopify connect / sync

Backend — Next.js API

- `app/api/*`
- `/api/stock`
- `/api/business`
- `/api/auth/otp`
- `/api/system-status`
- `/api/cron/daily-backup`
- `/api/cron/monthly-chart`

Data layer

- SQLite via libSQL — local file · optional Turso
- Vercel Blob — DB flush + JSON backups (durable sync on Vercel)
- Twilio WhatsApp — sandbox / optional
